

1b
Cont'd

(a) a flexible inner supply pipe;

(b) an outer secondary containment pipe;

(c) two spaced underground access chambers which are interconnected in a fluid tight manner through the side wall of one chamber;

(d) said flexible inner supply pipe positioned to provide a path of communication between said access chambers;

(e) said flexible inner supply pipe having an interior surface and an exterior surface;

(f) said secondary containment pipe surrounding the exterior surface of said inner supply pipe;

(g) all flexible inner supply pipe couplings and associated fittings being disposed within the access chambers;

(h) a fluid source at one end providing an originating interface to the flexible inner supply pipe; and

(i) a fluid outlet at the other end providing a terminating interface to the flexible inner supply pipe.

8. (Newly added) A secondarily contained fluid distribution system for supplying fuel to at least one fuel dispenser comprising:

(a) a fuel dispensing unit;

(b) a flexible inner fuel supply pipe;

(c) an underground outer secondary containment pipe;

(d) first and second spaced access chambers, said first access chamber being associated with said fuel dispensing

unit, said second access chamber being underground, said first and second access chambers being interconnected in a fluid tight manner through the side wall of the second access chamber;

(e) said flexible inner supply pipe positioned to provide a path of communication between said access chambers;

(f) said flexible inner supply pipe having an interior surface and an exterior surface;

(g) said secondary containment pipe surrounding the exterior surface of said inner supply pipe;

(h) all flexible inner fuel supply pipe connectors and associated fittings being disposed within the access chambers;

(i) a fuel source connector at one end of the flexible inner fuel supply pipe providing an originating interface to said flexible inner fuel supply pipe; and

(j) a fluid outlet at the other end of the flexible inner fuel supply pipe providing a terminating interface to said flexible inner fuel supply pipe which is connected to said fuel dispensing unit.
